

Aeromart Montreal, 27-29 April 2010
International Business Convention for the aerospace industry

Rhône-Alpes, a delegation of 11 companies with North-American ambitions

Aerospace cluster in Rhône-Alpes will be heading a delegation of 11 companies from the region which will collectively attend the international Business convention Aeromart Montréal 2010.

This convention is organised with the support of prime contractors located in Montreal area like Bombardier Aerospace – world leader for regional and business aircrafts –, Pratt & Whitney – one of the larger engines manufacturer or Bell Helicopter. This event offers Rhône-Alpes aerospace SMEs a unique opportunity to meet with primes and other potential partners, to develop long term business relationships. Aeromart Montréal will bring together during 3 days more than 300 companies coming from all around the aerospace planet (Canada, France, USA, Brazil, China, Germany, Mexico ...) and provide them with outstanding networking opportunities for business and partnership development in the North American aerospace market. With 11 companies, Rhône-Alpes will be very well represented and will offer one of the wider regional delegations.

Rhône-Alpes presence increase

It will be the second attendance of our regional delegation at this international business convention. En 2008 for the convention first edition, the cluster has been attending with 8 of its members. A first participation which has allowed the companies to initiate first very interesting and promising business contacts, and the cluster to validate the opportunity to access the North American market through Montreal.

Aerospace cluster give the chance to success

For this second edition, Aerospace Cluster in Rhône-Alpes has reinforced its members services and developed a global approach with its partners to secure its members success on the convention. Two major initiatives has been undertaken to prepare the 2010 participation of Rhône-Alpes with one single objective, to make its members participation successful by providing them with a concrete vision of the Canadian aerospace industry, its market opportunities and thus allow them to validate their own development strategy.

The first one has been to organise last November the venue in Rhône-Alpes of Pierre Brouillard from Montreal international. Mr Brouillard was formally the Procurement Vice-president of Bombardier

Aerospace. He gave us the right vision of Bombardier supply-chain organisation and allowed us to develop a vision on how to work in close collaboration with Montreal area aerospace companies.

Elsewhere, the cluster provides its members with the opportunity to share experiences on this market within dedicated workshops. The testimony of previous Aeromart participants has been particularly of interest for all the attendees, coming from more than 30 companies of the region.

Furthermore, Aerospace Cluster offers the opportunity to regional Aeromart participants to set-up a local presence through its partner in Montreal, Erai Canada.

A propos d'Aerospace Cluster In Rhône-Alpes

Aerospace Cluster In Rhône-Alpes regroups more than 200 companies and a network of aerospace laboratories which represents the 4th European wider RDT. The cluster carries their common will, to reinforce the industry competitiveness by supporting innovation, suppliers' performance and international business development.

Aerospace Cluster In Rhône-Alpes to install Rhône-Alpes as recognized aerospace region, supplier of innovative technological solutions for aeronautics and space

The cluster has been launched in 2004 and is supported by the Regional council. The cluster is managed by CRCI Rhône-Alpes, in partnership with ARDI Rhône-Alpes for innovation issues.
